

Running Heads and Page Numbers

Paragraph 1 of the running example. Reading aloud helps students who find print hard to follow. A reader that highlights each word as it is spoken keeps the eyes and ears together, and a reader that remembers where the student stopped makes long assignments manageable.

Paragraph 2 of the running example. The loader rebuilds structure from the page: it finds the body text size, treats larger or bolder short lines as headings, joins wrapped lines into paragraphs, and removes the hyphens that typesetting adds at line ends.

Paragraph 3 of the running example. Columns are read one after another, top to bottom, so a sentence is never interrupted by the text beside it. Running headers and page numbers repeat on every page and are left out of the reading.

Paragraph 4 of the running example. Reading aloud helps students who find print hard to follow. A reader that highlights each word as it is spoken keeps the eyes and ears together, and a reader that remembers where the student stopped makes long assignments manageable.

Paragraph 5 of the running example. The loader rebuilds structure from the page: it finds the body text size, treats larger or bolder short lines as headings, joins wrapped lines into paragraphs, and removes the hyphens that typesetting adds at line ends.

Paragraph 6 of the running example. Columns are read one after another, top to bottom, so a sentence is never interrupted by the text beside it. Running headers and page numbers repeat on every page and are left out of the reading.

Paragraph 7 of the running example. Reading aloud helps students who find print hard to follow. A reader that highlights each word as it is spoken keeps the eyes and ears together, and a reader that remembers where the student stopped makes long assignments manageable.

Paragraph 8 of the running example. The loader rebuilds structure from the page: it finds the body text size, treats larger or bolder short lines as headings, joins wrapped lines into paragraphs, and removes the hyphens that typesetting adds at line ends.

Paragraph 9 of the running example. Columns are read one after another, top to bottom, so a sentence is never interrupted by the text beside it. Running headers and page numbers repeat on every page and are left out of the reading.

Paragraph 10 of the running example. Reading aloud helps students who find print hard to follow. A reader that highlights each word as it is spoken keeps the eyes and ears together, and a reader that remembers where the student stopped makes long assignments manageable.

Paragraph 11 of the running example. The loader rebuilds structure from the page: it finds the body text size, treats larger or bolder short lines as headings, joins wrapped lines into paragraphs, and removes the hyphens that typesetting adds at line ends.

Paragraph 12 of the running example. Columns are read one after another, top to bottom, so a sentence is never interrupted by the text beside it. Running headers and page numbers repeat on every page and are left out of the reading.

Paragraph 13 of the running example. Reading aloud helps students who find print hard to follow. A reader that highlights each word as it is spoken keeps the eyes and ears together, and a reader that remembers where the student stopped makes long assignments manageable.

Paragraph 14 of the running example. The loader rebuilds structure from the page: it finds the body text size, treats larger or bolder short lines as headings, joins wrapped lines into paragraphs, and removes the hyphens that typesetting adds at line ends.

Paragraph 15 of the running example. Columns are read one after another, top to bottom, so a sentence is never interrupted by the text beside it. Running headers and page numbers repeat on every page and are left out of the reading.

Paragraph 16 of the running example. Reading aloud helps students who find print hard to follow. A reader that highlights each word as it is spoken keeps the eyes and ears together, and a reader that remembers where the student stopped makes long assignments manageable.

Paragraph 17 of the running example. The loader rebuilds structure from the page: it finds the body text size, treats larger or bolder short lines as headings, joins wrapped lines into paragraphs, and removes the hyphens that typesetting adds at line ends.

Paragraph 18 of the running example. Columns are read one after another, top to bottom, so a sentence is never interrupted by the text beside it. Running headers and page numbers repeat on every page and are left out of the reading.

Paragraph 19 of the running example. Reading aloud helps students who find print hard to follow. A reader that highlights each word as it is spoken keeps the eyes and ears together, and a reader that remembers where the student stopped makes long assignments manageable.

Paragraph 20 of the running example. The loader rebuilds structure from the page: it finds the body text size, treats larger or bolder short lines as headings, joins wrapped lines into paragraphs, and removes the hyphens that typesetting adds at line ends.

Paragraph 21 of the running example. Columns are read one after another, top to bottom, so a sentence is never interrupted by the text beside it. Running

headers and page numbers repeat on every page and are left out of the reading.

Paragraph 22 of the running example. Reading aloud helps students who find print hard to follow. A reader that highlights each word as it is spoken keeps the eyes and ears together, and a reader that remembers where the student stopped makes long assignments manageable.

Paragraph 23 of the running example. The loader rebuilds structure from the page: it finds the body text size, treats larger or bolder short lines as headings, joins wrapped lines into paragraphs, and removes the hyphens that typesetting adds at line ends.

Paragraph 24 of the running example. Columns are read one after another, top to bottom, so a sentence is never interrupted by the text beside it. Running headers and page numbers repeat on every page and are left out of the reading.
