

Where the water goes

The river carries water from the hills to the sea.

Most of the water in the river falls as rain in the spring.

Please read the course page before class on Monday.

The next section explains how the samples were taken; see Methods.

The raw numbers are listed on page 3, see page 3.

~~This sentence was a draft~~ and should go.

A final line for the script link test.

Methods

Samples were taken every week from three places on the river.

Each sample was weighed, dried, and weighed again.

Week one: 12.1, 11.8, and 12.4 grams of silt in each litre.

Week two: 10.2, 10.9, and 11.3 grams of silt in each litre.
